

SC-3346 Maintenance (Derived) Pricing — E2E Test Executive Summary

Org FortraUAT · Pricing procedure V14 · Peer review SC-3403 · Workday/MuleSoft integration excluded · executed scenarios only · sorted by status · 2026-06-13

BUILD-READINESS: NO-GO

New-business (first-year) derived-maintenance pricing and its plumbing (decomposition base, stamp flow, Source_List_Price carry-forward, V14, B-4 null-guards) PASS. But the RENEWAL COLA path is broken at commit (correct net computed, commits \$0 / 60.64 on every renewal-maintenance line) — a SC-3346 build defect (NOT SC-3404; SC-3404 is the SC-3390 tiered-pricing peer review, Done). Plus one NEW un-ticketed tier defect (3 of 7 tiers hard-coded -> \$0 first-year maintenance) and the systemic SC-3372 PBEDP gap (95% of derived PBEs unconfigured).

ID	SCENARIO	STATUS	SEVERITY	ATTRIBUTION
MAINT-ONLY	Maintenance-only renewal quote (no contributor) -> MissingContributor handling Edge cases	FAIL	CRITICAL	SC-3346 renewal-maintenance commit defect (unticketed; NOT SC-3404)
RN-COLA-COMMIT	Renewal maintenance committed NetUnitPrice does not equal expected COLA net Renewal COLA pricing	FAIL	CRITICAL	SC-3346 renewal-maintenance commit defect (unticketed; NOT SC-3404)
MULTI-ASSET	Multi-asset renewal (license + maintenance both renewed) Edge cases	FAIL	HIGH	SC-3346 renewal-maintenance commit defect

ID	SCENARIO	STATUS	SEVERITY	ATTRIBUTION
				(unticketed; NOT SC-3404)
NB-DERIVED-TIER	Maintenance tier/rate lookup (Maintenance_Rate / type) resolves correct % Derived (new-business) pricing	FAIL	HIGH	NEW · no ticket
PBEDP-COVERAGE	Derived-PBE PriceBookEntryDerivedPrice config completeness (95% gap; M-5 / SC- 3372) Config & data integrity	FAIL	HIGH	SC-3372
RN-MULTIYEAR	Additional-year / out-year / MyCAP renewal COLA pricing: computed correctly but never committed (renewal-maintenance net wrong on commit) Renewal COLA pricing	FAIL	HIGH	SC-3346 renewal- maintenance commit defect (unticketed; NOT SC-3404)
RN-PARTNER-DD	Partner discount double-applied on renewal maintenance (COLA net x 0.90 = 60.64 instead of 67.38) Renewal COLA pricing	FAIL	HIGH	SC-3346 renewal- maintenance commit defect (unticketed; NOT SC-3404)
ZERO-LIST-PBE	Derived maintenance PBEs with \$0 list price (SC-3372 secondary): zero-list PBE yields \$0 maintenance line on reprice Config & data integrity	FAIL	HIGH	SC-3372
DECOMP-SPLIT	Maintenance order line decomposition (parent license to derived maintenance child via Original_Order_Item__c) Order decomposition	PARTIAL	MEDIUM	SC-3346
MDT-RECORDS	Maintenance_Type_Defn / Maintenance_Rate / COLA rules CMDT records present & correct Config & data integrity	PARTIAL	MEDIUM	

ID	SCENARIO	STATUS	SEVERITY	ATTRIBUTION
NB-DERIVED-FORMULA	Which new-business formula computes the derived net (Source_List_Price x tier live vs Base_Price x tier dead-code) Derived (new-business) pricing	PARTIAL	MEDIUM	SC-3403 (M-2)
RN-COLA-RATES	COLA uplift rate lookup by solution category (COLA_Uplift_Rules__mdt) vs spec rates Renewal COLA pricing	PARTIAL	MEDIUM	SC-3350
B4-NULLGUARD	B-4: renewal formula ISNULL guards + null carry-forward Peer-review findings	PASS	NONE	SC-3403 (B-4); (separate \$0-commit blocker, still open)
DECOMP-BASE	B-6: maintenance OrderItem carries maintenance base (~71) not license base (355) Order decomposition	PASS	NONE	SC-3403 (B-6)
NB-DERIVED-NET	First-year maintenance derived NetUnitPrice value is correct Derived (new-business) pricing	PASS	NONE	
PROC-V14	V14 active + derived/maintenance procedure elements present & correct Config & data integrity	PASS	NONE	SC-3403
RN-COLA-MATH	Renewal maintenance COLA net computed in-flight = (Base - priorPartner - priorDisc) x (1 + COLA%) Renewal COLA pricing	PASS	NONE	
SLP-CARRY	Source_List_Price carry-forward Quote->Order (M-4 QuoteToOrderFieldMapper) Stamp / data flow	PASS	NONE	
STAMP-FLOW	Stamp_Maintenance_Pricing_Inputs correctly stamps Base_Price / COLACalculatedPrice / priors / COLA% / product type before-save and re-fires on reprice Stamp / data flow	PASS	NONE	

✖ Failures (sorted by severity)

- **MAINT-ONLY** — Maintenance-only renewal quote (no contributor) -> MissingContributor handling
CRITICAL SC-3346 renewal-maintenance commit defect (unticketed; NOT SC-3404)
MissingContributor handling is non-fatal/graceful (transaction completes), BUT the maintenance line does NOT price correctly. Canary Draft quote 00781109 (0Q0WC0000038aXd0AI), single RRM line PIA-PIA-RRM-PIAM (QLI 0QLWC000003e2Sn4AI), ParentQuoteLineItemId + RelatedQuoteLineItemId
- **RN-COLA-COMMIT** — Renewal maintenance committed NetUnitPrice does not equal expected COLA net
CRITICAL SC-3346 renewal-maintenance commit defect (unticketed; NOT SC-3404)
On all 4 canary lines NetUnitPrice diverges from the correct COLA net: 00781043 commits 0 (exp 67.38), 00781053 commits 54.58 (exp 60.64), 00781084 commits 60.64 (exp 67.38), 00781109 commits 60.64 / UnitPrice 0 (exp 67.38). The wrong values are either \$0 or COLA-net x 0.90 (part
- **MULTI-ASSET** — Multi-asset renewal (license + maintenance both renewed) **HIGH** SC-3346 renewal-maintenance commit defect (unticketed; NOT SC-3404)
Split outcome. License/subscription leg renews CORRECTLY (NetUnitPrice 4442.35, SalesTransactionActionType=Renew, ItemsDerived=false). Renewal-maintenance leg is WRONG: COLA net 60.64 is correctly computed into COLACalculatedPrice__c but committed NetUnitPrice = 54.58 (= 60.64 x
- **NB-DERIVED-TIER** — Maintenance tier/rate lookup (Maintenance_Rate / type) resolves correct % **HIGH NEW**
Tier resolution is correct for the 3 dominant tiers ONLY (Premier 0.30, Professional 0.20, Standard 0.20) and is NOT a CMDT lookup at all - the rates are hard-coded inline in the V14 DerivedPricingFormula IF-chain. The 4 remaining MTD tiers used on live lines (Basic 182, platinum
- **PBEDP-COVERAGE** — Derived-PBE PriceBookEntryDerivedPrice config completeness (95% gap; M-5 / SC-3372) **HIGH** SC-3372
Only 174 of 3,453 derived PBEs are covered by config (176 PBEDP rows, 2 multi-contributor). 3,279 of 3,453 (95.0%) have NO derived-price config; ALL 3,453 are UnitPrice=0 zero-list and ALL are IsActive=true, so the entire 95% gap is live exposure. Gap by type: New Maintenance 1,7
- **RN-MULTIYEAR** — Additional-year / out-year / MyCAP renewal COLA pricing: computed correctly but never committed (renewal-maintenance net wrong on commit) **HIGH** SC-3346 renewal-maintenance commit defect (unticketed; NOT SC-3404)
COMPUTATION is WIRED and CORRECT, but the COMMIT is BROKEN. After a live Force reprice (Place Sales Transaction + configurationMethod Skip, isSuccess:true, non-destructive: line count stayed 1) of canary 00781109 / 0Q0WC0000038aXd0AI: the renewal-maintenance line 0QLWC000003e2Sn4
- **RN-PARTNER-DD** — Partner discount double-applied on renewal maintenance (COLA net x 0.90 = 60.64 instead of 67.38) **HIGH** SC-3346 renewal-maintenance commit defect (unticketed; NOT SC-3404)
Committed NetUnitPrice = 60.64 = COLA net 67.38 x 0.90 (a flat ~10% partner discount re-applied on top of the already-net COLA price). The partner discount is counted TWICE: once as the Prior_Partner_Discount__c=8.52 subtraction inside the COLA net, and again as the x0.90 layer.
- **ZERO-LIST-PBE** — Derived maintenance PBEs with \$0 list price (SC-3372 secondary): zero-list PBE yields \$0 maintenance line on reprice **HIGH** SC-3372
All 3,453 derived PBEs are zero-list (UnitPrice=0, 100%; UnitPrice>0 returns 0). Only 176 PriceBookEntryDerivedPrice config rows cover 174 distinct PBEs -> 3,279 uncovered (95%); on the real transacting Fortra Price Book, 1,717 uncovered vs 172 covered (91% uncovered). Live non-d

✔ Working (pass)

- **B4-NULLGUARD** — B-4: renewal formula ISNULL guards + null carry-forward

- **DECOMP-BASE** — B-6: maintenance OrderItem carries maintenance base (~71) not license base (355)
- **NB-DERIVED-NET** — First-year maintenance derived NetUnitPrice value is correct
- **PROC-V14** — V14 active + derived/maintenance procedure elements present & correct
- **RN-COLA-MATH** — Renewal maintenance COLA net computed in-flight = $(\text{Base} - \text{priorPartner} - \text{priorDisc}) \times (1 + \text{COLA}\%)$
- **SLP-CARRY** — Source_List_Price carry-forward Quote->Order (M-4 QuoteToOrderFieldMapper)
- **STAMP-FLOW** — Stamp_Maintenance_Pricing_Inputs correctly stamps Base_Price / COLACalculatedPrice / priors / COLA% / product type before-save and re-fires on reprice

Ticket note: the renewal-commit failures are a **SC-3346 build defect (unticketed)** — NOT “SC-3404” (SC-3404 is the SC-3390 tiered-pricing Peer Review, Done/approved). **Scope:** shows the 19 executed scenarios only (11 further scenarios — test coverage, suite, peer-review findings B-3/B-5/M-1/M-2/M-5, auto-add, field packaging, SDD conformance — were not executed and are excluded from this view). **Guardrails:** managed reprice only (RLM Quote-DML blocked), no deletes, no order activation, integration out of scope.
