1. Executive Summary

This document describes the revised solution architecture for Legal Entity and Currency management on Salesforce Opportunities within Fortra's Revenue Cloud implementation. The revision addresses an incorrect assumption in the original design: that each Legal Entity has a single, fixed currency. Following review with Salesforce, it was confirmed that a Legal Entity's CurrencyIsoCode represents only its primary currency, and that transactional currencies can differ from the primary currency without negative downstream effects in Revenue Cloud Advanced (RCA).

The revised solution decouples currency selection from Legal Entity assignment by introducing a Custom Metadata Type (CMDT) that maps each Legal Entity to its set of allowed transactional currencies. This enables a single Legal Entity record per business entity while supporting multi-currency transactions. The solution preserves guardrails for data integrity, including validation that any Opportunity's transactional currency is valid for its assigned Legal Entity, and guided workflows for scenarios involving existing Quotes.

1.1 Key Features

- **Custom Metadata Type (Legal_Entity_Currency__mdt):** Defines which currencies each Legal Entity can transact in, with primary currency designation
- **CMDT-Driven Currency Picker:** Screen Flow presents users with a filtered list of valid currencies when changing Legal Entity
- **Hybrid Validation Approach:** Direct Legal Entity edits allowed when no Quotes exist (validated by before-save flow); guided Change Legal Entity flow required when Quotes exist
- **Backward-Compatible Auto-Selection:** New Opportunities inherit Legal Entity from Account and default to the CMDT-defined primary currency
- **Currency Sync Deactivation:** Removes the automatic currency-override behavior that forced Opportunity currency to match Legal Entity's CurrencyIsoCode

2. Solution Overview

2.1 Process Flow Summary

The Legal Entity Multi-Currency Validation solution follows this sequence:

- New Opportunity Created:** Legal Entity auto populated from Account's Default Legal Entity; currency defaulted to CMDT primary currency for that entity
- User Changes Legal Entity (No Quotes):** User directly edits Legal Entity field; the 'before-save' flow validates that the current Opportunity currency is in the CMDT allowed list for the new Legal Entity; if invalid, error directs user to the Change Legal Entity flow
- User Changes Legal Entity (Quotes Exist):** Validation rule blocks direct edits; user must use the **Change Legal Entity** quick action, which presents valid currency options from CMDT and handles Quote conflicts
- Change Legal Entity Flow — Currency Valid:** If the current Opportunity currency is valid for the new Legal Entity, the Legal Entity is updated without affecting Quotes or currency
- Change Legal Entity Flow — Currency Invalid:** If the current Opportunity currency is NOT valid for the new Legal Entity, the user is offered the option to delete all Quotes and select a new currency, or cancel
- Downstream Inheritance:** Quote, Order, and other RCA objects inherit the validated Legal Entity and currency from the Opportunity — no additional per-object validation required

2.2 Solution Components

Component	Type	Description
Legal_Entity_Currency__mdt	Custom Metadata Type	Maps allowed currencies per Legal Entity with primary currency flag. 32 records covering 10 Legal Entities.
Fortra_Opportunity_Change_Legal_Entity	Screen Flow (Revised)	Guided workflow for changing Legal Entity with CMDT-driven currency picker. Handles Quote conflicts.
Fortra_Opportunity_LE_Currency_Validation	Before-Save Flow (New)	Validates that Opportunity currency is in the CMDT allowed list when Legal Entity changes via direct edit.
LE_Change_In_Progress__c	Custom Field (New)	Checkbox on Opportunity used as a bypass flag for the validation rule during flow-driven updates.
Legal_Entity_Requires_Action	Validation Rule (Modified)	Blocks direct Legal Entity edits when Quotes exist. Updated to use bypass flag

Component	Type	Description
		instead of currency mismatch check.
Fortra_Opportunity_Legal_Entity_AutoSelect	Record-Triggered Flow (Modified)	Auto-populates Legal Entity and currency on new Opportunities. Updated to use CMDT primary currency.
Fortra_Opportunity_Currency_Sync	Record-Triggered Flow (Deactivated)	Previously auto-synced currency to Legal Entity's CurrencyIsoCode. Deactivated — currency is now user-controlled.
Quote_Count__c	Custom Field (Unchanged)	Denormalized count of Quotes on Opportunity. Still used by validation rule and flow logic.
Fortra_Quote_Count_Maintenance	Record-Triggered Flow (Unchanged)	Increments Quote_Count__c when a Quote is created on the Opportunity.
Fortra_Quote_Count_Maintenance_Delete	Record-Triggered Flow (Unchanged)	Decrements Quote_Count__c when a Quote is deleted from the Opportunity.
Opportunity.Change_Legal_Entity	Quick Action (Unchanged)	Button on Opportunity record page that launches the Change Legal Entity screen flow.

3. Requirements

3.1 Business Requirements

ID	Requirement	Priority
BR-001	Each Legal Entity must have exactly one record in Salesforce, representing one business entity regardless of how many currencies it supports.	High
BR-002	Users must be able to select a transactional currency from a list of currencies allowed for the selected Legal Entity.	High
BR-003	The system must prevent users from assigning a currency to an Opportunity that is not valid for the Opportunity's Legal Entity.	High
BR-004	When a new Opportunity is created, the Legal Entity should default from the Account and the currency should default to the Legal Entity's primary currency.	High
BR-005	When Quotes exist on an Opportunity, users must be guided through a structured workflow to change the Legal Entity, with clear warnings about potential impacts.	High
BR-006	Users should be able to change the Legal Entity directly (without the flow) when no Quotes exist, as long as the current currency is valid for the new Legal Entity.	Medium
BR-007	Changing the Legal Entity on an Opportunity must NOT automatically change the transactional currency. Currency changes should be explicit user actions.	High
BR-008	The Legal Entity to Currency mapping must be administrator-configurable without code changes.	Medium

3.2 Technical Requirements

ID	Requirement	Priority
TR-001	Create a Custom Metadata Type (Legal_Entity_Currency__mdt) with fields for Legal Entity Name, Currency Code, Is Primary, and Is Active.	High
TR-002	Implement a before-save record-triggered flow on Opportunity that validates the Legal Entity + Currency combination against the CMDT when Legal Entity changes.	High
TR-003	Rewrite the Change Legal Entity screen flow to query CMDT for allowed currencies and present a dynamic currency picker using collectionChoiceSet (API 56.0+).	High
TR-004	Add a bypass checkbox field (LE_Change_In_Progress__c) to Opportunity to allow the screen flow's DML updates to bypass the validation rule.	High

ID	Requirement	Priority
TR-005	Update the Legal_Entity_Requires_Action validation rule to use the bypass flag instead of comparing Legal Entity and Opportunity currencies.	High
TR-006	Deactivate the Fortra_Opportunity_Currency_Sync flow to stop automatic currency overrides when Legal Entity changes.	High
TR-007	Modify the Fortra_Opportunity_Legal_Entity_AutoSelect flow to query CMDT for the Legal Entity's primary currency instead of using LegalEntity.CurrencyIsoCode.	Medium
TR-008	Create 32 CMDT records covering all 10 active Legal Entities and their allowed currencies as defined in the Fortra Legal Entities reference document.	High

4. Assumptions

The following assumptions have been made during the design of this solution:

ID	Assumption
A-001	The Salesforce org has multi-currency enabled and all required currency ISO codes (USD, EUR, GBP, CAD, AUD, JPY, CHF, NZD, ARS) are configured as active currencies.
A-002	Legal Entity names in the Salesforce org exactly match the names in the CMDT records. A pre-deployment data audit will verify this.
A-003	Validation of the Legal Entity + Currency combination is only required at the Opportunity level. Downstream objects (Quote, Order, Contract, Asset) inherit from the Opportunity.
A-004	The Salesforce platform limitation preventing currency changes on Opportunities with existing Quote Line Items remains in effect.
A-005	The collectionChoiceSet flow element (available since API 56.0) is supported in the target org. The current project uses API version 64.0.
A-006	Transactional currency can differ from the Legal Entity's primary CurrencyIsoCode without causing issues in Revenue Cloud billing, asset management, or order processing.
A-007	The existing Account.Default_Legal_Entity__c lookup field will continue to be used for auto-populating Legal Entity on new Opportunities.
A-008	Renewal-only Legal Entities (Terranova Worldwide Corporation, Tripwire Inc.) should still be included in the CMDT for existing Opportunity management, even though they are not used for new sales.

5. Dependencies

The following dependencies exist for this solution:

5.1 Internal Dependencies

ID	Dependency	Status
D-001	Quote_Count__c field and Quote Count Maintenance flows must be deployed and operational before the validation rule and screen flow can function correctly.	Complete
D-002	Account.Default_Legal_Entity__c lookup field must exist on Account for the auto-select flow to function.	Complete
D-003	Opportunity.Legal_Entity__c lookup field to LegalEntity must exist.	Complete
D-004	Legal Entity records must exist in the Salesforce org with names matching the CMDT records exactly.	Verification Required
D-005	The Fortra_Opportunity_Currency_Sync flow must be deactivated BEFORE deploying the revised screen flow to prevent conflicting currency behavior.	Pending

5.2 External Dependencies

ID	Dependency	Owner
E-001	Salesforce confirmation that transactional currency independence from Legal Entity primary currency does not impact RCA billing, asset creation, or order processing.	Salesforce / Fortra - Complete
E-002	Fortra Legal Entities Confluence reference document provides the authoritative list of Legal Entities, primary currencies, and allowed currencies.	Fortra Business Operations - Complete
